Florida's February Figures Released

Florida's seasonally adjusted unemployment rate was 4.6 percent in February 2026, up 0.1 percentage point from the January 2026 rate, and up 1.0 percentage point from a year ago. There were 516,000 jobless Floridians out of a labor force of 11,141,000. The U.S. seasonally adjusted unemployment rate was 4.4 percent in February.

Florida's seasonally adjusted total nonagricultural employment was 9,969,200 in February 2026, an increase of 1,800 jobs (less than +0.1 percent) over the month. The state lost 36,700 jobs over the year, a decrease of 0.4 percent. Nationally, the number of jobs rose 0.1 percent over the year.

United States and Florida Unemployment Rates (seasonally adjusted)

Source: U.S. Department of Labor, Bureau of Labor Statistics, Local Area Unemployment Statistics Program, in cooperation with the Florida Department of Commerce, Bureau of Workforce Statistics and Economic Research.

Florida's Nonagricultural Employment by Industry (Seasonally Adjusted)

- Nine of ten major industries experienced negative over-the-year job growth in February.
- The industry gaining jobs over the year was only education and health services (+35,500 jobs, +2.2 percent).
- The industries losing jobs over the year included professional and business services (-12,100 jobs, -0.7 percent); total government (-11,100 jobs, -1.0 percent); leisure and hospitality (-10,300 jobs, -0.8 percent); trade, transportation, and utilities (-9,100 jobs, -0.5 percent); construction (-9,100 jobs, -1.4 percent); other services (-8,100 jobs, -2.1 percent); financial activities (-7,500 jobs, -1.1 percent); information (-5,000 jobs, -3.2 percent), and manufacturing (-100 jobs, less than 0.1 percent).

Local Area Unemployment Statistics (Not Seasonally Adjusted)

- In February 2026, Miami-Dade County had the state's lowest unemployment rate (2.8 percent), followed by Monroe County (3.5 percent), and Wakulla County (4.3 percent).
- Taylor County had the highest unemployment rate (9.3 percent) in Florida in February 2026, followed by Sumter County (8.8 percent), and Citrus County and Hamilton County (7.1 percent each).

Area Nonagricultural Employment (Not Seasonally Adjusted)

- In February 2026, 9 of all 25 metro areas in Florida had over-the-year job gains. The areas with the largest gains were the Lakeland-Winter Haven MSA (+1,800 jobs, +0.6 percent) and the Ocala MSA (+1,800 jobs, +1.4 percent), followed by the Orlando-Kissimmee-Sanford MSA (+1,500 jobs, +0.1 percent), and the Pensacola-Ferry Pass-Brent MSA (+1,100 jobs, +0.5 percent).
- Fifteen metro areas in Florida lost jobs over the year in February 2026. The areas losing more than 3,000 jobs were the West Palm Beach-Boca Raton-Delray Beach MD (-10,500 jobs, -1.5 percent), the Fort Lauderdale-Pompano Beach-Sunrise MD (-9,400 jobs, -1.0 percent), the Cape Coral-Fort Myers MSA (-4,600 jobs, -1.4 percent), the Naples-Marco Island MSA (-4,300 jobs, -2.3 percent), the Jacksonville MSA (-3,500 jobs, -0.4 percent), and the Tampa Division (-3,100 jobs, -0.3 percent).
- The Sebring MSA was unchanged in jobs over the year.

The unemployment and job growth rates are estimates, which are primarily based on surveys created and mandated by the U.S. Bureau of Labor Statistics in cooperation with the Florida Department of Commerce.

The unemployment rate is derived from Florida household surveys conducted by the U.S. Census Bureau under contract with the U.S. Bureau of Labor Statistics. The job growth rate is derived from Florida employer surveys conducted by the U.S. Bureau of Labor Statistics.

Both estimates are revised on a monthly basis. In addition, these estimates are benchmarked (revised) annually based on actual counts from Florida's Reemployment Assistance tax records and other data.

Procedures mandated by the U.S. Bureau of Labor Statistics may result in more variable month-to-month changes. For further information, go to: <https://www.bls.gov/sae/>

The mission of the Florida Department of Commerce is to promote economic prosperity for all Floridians and businesses through successful workforce, community, and economic development strategies. Please visit www.floridajobs.org for more information.

Labor market data for March 2026 will be released on May 1, 2026, at 10:00 A.M.

THE EMPLOYMENT SITUATION — FEBRUARY 2026

Total **nonfarm payroll employment** edged down by 92,000 in February, and the **unemployment rate** changed little at 4.4 percent, the U.S. Bureau of Labor Statistics reported today. Employment in health care decreased, reflecting strike activity. Employment in information and federal government continued to trend down.

Chart 1. Unemployment rate, seasonally adjusted, February 2024 – February 2026

Note: Data for October 2025 were not collected due to the federal government shutdown.

Chart 2. Nonfarm payroll employment over-the-month change, seasonally adjusted, February 2024 – February 2026

Changes to Household Survey Data

Household survey data for January and February 2026 reflect updated population estimates. January 2026 estimates from the household survey were revised to incorporate the updated population estimates. See the note beginning on page 4 for more information.

This news release presents statistics from two monthly surveys. The household survey measures labor force status, including unemployment, by demographic characteristics. The establishment survey measures nonfarm employment, hours, and earnings by industry. For more information about the concepts and statistical methodology used in these two surveys, see the Technical Note.

Household Survey Data

Both the **unemployment rate**, at 4.4 percent, and the number of **unemployed people**, at 7.6 million, changed little in February. (See table A-1. See the note on page 4 and tables A and B for more information about the annual population adjustments to the household survey estimates.)

Among the **major worker groups**, the unemployment rates for adult men (4.0 percent), adult women (4.1 percent), teenagers (14.9 percent), and people who are White (3.7 percent), Black (7.7 percent), Asian (4.8 percent), or Hispanic (5.2 percent) showed little or no change in February. (See tables A-1, A-2, and A-3.)

The number of **long-term unemployed** (those jobless for 27 weeks or more) changed little at 1.9 million in February but is up from 1.5 million a year earlier. The long-term unemployed accounted for 25.3 percent of all unemployed people in February. (See table A-12.)

Both the **labor force participation rate**, at 62.0 percent, and the **employment-population ratio**, at 59.3 percent, changed little in February. These measures showed little change over the year, after accounting for the annual adjustments to the population controls. (See table A-1. For additional information about the effects of the population adjustments, see the note on page 4 and table B.)

The number of people employed **part time for economic reasons** decreased by 477,000 to 4.4 million in February. These individuals would have preferred full-time employment but were working part time because their hours had been reduced or they were unable to find full-time jobs. (See table A-8.)

The number of people **not in the labor force who currently want a job** changed little in February at 6.0 million. These individuals were not counted as unemployed because they were not actively looking for work during the 4 weeks preceding the survey or were unavailable to take a job. (See table A-1.)

Among those not in the labor force who wanted a job, the number of people **marginally attached to the labor force** changed little at 1.6 million in February. These individuals wanted and were available for work and had looked for a job sometime in the prior 12 months but had not looked for work in the 4 weeks preceding the survey. The number of **discouraged workers**, a subset of the marginally attached who believed that no jobs were available for them, decreased by 109,000 in February to 366,000. (See Summary table A.)

Establishment Survey Data

Total **nonfarm payroll employment** edged down by 92,000 in February, following an increase in January (+126,000). Employment in health care decreased in February, reflecting strike activity. Employment in information and federal government continued to trend down. Payroll employment changed little on net in 2025. (See table B-1.)

Health care employment declined by 28,000 in February, following a large increase in January (+77,000). Offices of physicians lost 37,000 jobs in February, primarily due to strike activity. Hospitals

added 12,000 jobs. Over the prior 12 months, health care had added an average of 36,000 jobs per month.

Employment in **information** continued to trend down in February (-11,000). The industry had lost an average of 5,000 jobs per month over the prior 12 months.

In February, **federal government** employment continued to decline (-10,000). Since reaching a peak in October 2024, federal government employment is down by 330,000, or 11.0 percent.

Employment in **social assistance** continued its upward trend in February (+9,000), driven by individual and family services (+12,000).

Transportation and warehousing employment changed little in February (-11,000). A job loss in couriers and messengers (-17,000) was partially offset by a gain in air transportation (+5,000). Employment in transportation and warehousing has declined by 157,000, or 2.4 percent, since reaching a peak in February 2025.

Employment showed little change over the month in other major industries, including **mining, quarrying, and oil and gas extraction; construction; manufacturing; wholesale trade; retail trade; financial activities; professional and business services; leisure and hospitality; and other services.**

In February, **average hourly earnings for all employees** on private nonfarm payrolls rose by 15 cents, or 0.4 percent, to \$37.32. Over the past 12 months, average hourly earnings have increased by 3.8 percent. In February, average hourly earnings of private-sector **production and nonsupervisory employees** rose by 9 cents, or 0.3 percent, to \$32.03. (See tables B-3 and B-8.)

In February, the **average workweek for all employees** on private nonfarm payrolls was unchanged at 34.3 hours. In manufacturing, the average workweek edged down by 0.1 hour to 40.1 hours, and overtime was unchanged at 3.0 hours. The average workweek for **production and nonsupervisory employees** on private nonfarm payrolls was unchanged at 33.8 hours. (See tables B-2 and B-7.)

The change in total nonfarm payroll employment for December was revised down by 65,000, from +48,000 to -17,000, and the change for January was revised down by 4,000, from +130,000 to +126,000. With these revisions, employment in December and January combined is 69,000 lower than previously reported. (Monthly revisions result from additional reports received from businesses and government agencies since the last published estimates and from the recalculation of seasonal factors.)

The Employment Situation for March is scheduled to be released on Friday, April 3, 2026, at 8:30 a.m. (ET).

Adjustments to Population Estimates for the Household Survey

Effective with revised data for January 2026, updated population estimates were incorporated into the household survey. Population estimates for the household survey are developed by the U.S. Census Bureau. Each year, the Census Bureau updates their population estimates to incorporate new information on births, deaths, and migration to estimate the change in population since the most recent decennial census. The Census Bureau population update also includes improvements in estimation methodology.

The 2026 update was delayed by a month due to the 2025 federal government shutdown. With the release of February data, all household survey data for January 2026 were revised to incorporate the new population estimates. (Household survey estimates for January 2026 have been updated in the BLS database. However, the January 2026 Employment Situation news release will not be reissued.) Over-the-month comparisons of February data with revised January data are not affected by the population control adjustment, although comparisons with earlier months may be affected.

This year, changes to Census Bureau methodology include the incorporation of updated demographic information about the population from the 2020 Census. This marks a departure from the “blended base” introduced in recent years that combined population totals from the 2020 Census and demographic characteristics from other sources. The new population estimates also include updated information about a decline in net international migration. The January 2026 adjustment reflects changes back to the April 2020 Census population base, even though the entire adjustment is incorporated in the January 2026 household survey estimates.

While the net effect of the updated 2020 Census base on the total population level was relatively small, shifts in the demographic composition of the population had notable impacts on labor force measures.

The updated 2020 Census base resulted in a decrease in the population level for men (mostly among those ages 25 to 54), while the population level for women increased (particularly among those age 65 and over). A decline in the number of men ages 25 to 54 (who tend to have higher labor force participation rates than other groups) and an increase in the number of women age 65 and over (who generally have lower labor force participation rates than other groups) both put downward pressure on the overall labor force participation rate. These population changes had similar impacts on employment and the overall employment-population ratio. The unemployment rate was unaffected.

In addition, the updated 2020 Census base resulted in some notable population differences across race groups. There were decreases in both the White population and the Black or African American population, while there were substantial increases in the Asian population and people in other race groups, including those who are two or more races. (People who report two or more races are not included in the individual race groups.) There was relatively little change in the number of people who are Hispanic or Latino. (People of Hispanic or Latino ethnicity may be of any race.)

In accordance with usual practice, BLS did not revise the official household survey estimates for December 2025 and earlier months. However, to show the impact of the population adjustments, table A displays differences in selected December 2025 labor force series based on the old and new population estimates.

Table A shows that the adjustment decreased the estimated size of the civilian noninstitutional population age 16 and over in December by 231,000. However, the adjustment increased the number of people not in the labor force by 1.2 million and decreased both the total civilian labor force and the

number of employed people by 1.4 million each. The adjustment lowered the labor force participation rate by 0.4 percentage point and lowered the employment-population ratio by 0.5 percentage point. The adjustment had little effect on the total unemployment level (+15,000), and the unemployment rate was unchanged.

These annual population adjustments can affect the comparability of household data series over time. Table B shows the effect of the introduction of new population estimates on the change in selected labor force measures between December 2025 and January 2026. The example in table B can be replicated to account for an over-the-year comparison, where the effect of the 2026 population control would be subtracted from the over-the-year change to remove the effects of the population control adjustment.

Population controls for veterans, which are derived from a U.S. Department of Veterans Affairs population model and are updated periodically, did not change with data for January 2026.

Although the official series for December 2025 and earlier will not be revised, BLS is planning to provide an update to the experimental series that were originally introduced with the 2025 population control adjustment. These experimental time series account for the size and timing of the updated population control adjustments back to the April 2020 Census base. These experimental series are not available with this news release but will be available as soon as practicable at www.bls.gov/cps/documentation.htm#pop.

Additional information about the population adjustments and their effects on national labor force estimates is available at www.bls.gov/cps/documentation.htm#pop.

Table A. Effect of the updated population controls on December 2025 estimates by sex, race, and Hispanic or Latino ethnicity, not seasonally adjusted
(Numbers in thousands)

Category	Total	Men	Women	White	Black or African American	Asian	Hispanic or Latino ethnicity
Civilian noninstitutional population.....	-231	-1,540	1,309	-5,642	-655	1,301	403
Civilian labor force.....	-1,417	-1,630	212	-4,861	-535	938	165
Participation rate.....	-0.4	-0.5	-0.4	-0.7	-0.3	0.4	-0.2
Employed.....	-1,432	-1,588	155	-4,672	-520	893	110
Employment-population ratio.....	-0.5	-0.4	-0.4	-0.7	-0.4	0.3	-0.3
Unemployed.....	15	-42	57	-188	-16	44	56
Unemployment rate.....	0.0	0.1	0.1	-0.1	0.1	0.1	0.2
Not in labor force.....	1,185	89	1,096	-781	-121	364	238

NOTE: Detail may not sum to totals because of rounding. Estimates for the above race groups (White, Black or African American, and Asian) do not sum to totals because data are not presented for all races. People whose ethnicity is identified as Hispanic or Latino may be of any race.

Table B. December 2025-January 2026 changes in selected labor force measures, with adjustments for population control effects
(Numbers in thousands)

Category	Dec.-Jan. change	2026 population control effect	Dec.-Jan. change, after removing the population control effect ¹
Civilian noninstitutional population.....	-140	-231	91
Civilian labor force.....	-1,030	-1,417	387
Participation rate.....	-0.3	-0.4	0.1
Employed.....	-895	-1,432	537
Employment-population ratio.....	-0.3	-0.5	0.2
Unemployed.....	-135	15	-150
Unemployment rate.....	-0.1	0.0	-0.1
Not in labor force.....	890	1,185	-295

¹ This Dec.-Jan. change is calculated by subtracting the population control effect from the over-the-month change in the published seasonally adjusted estimates.

NOTE: Detail may not sum to totals because of rounding. The December to January change incorporates revised January data.

DIFFUSION INDEX (Over 1-month span) ⁵				
Total private (250 industries).....	50.6	49.6	54.6	50.8
Manufacturing (72 industries).....	41.0	41.7	47.9	45.1

¹ Includes other industries, not shown separately.

² Data relate to production employees in mining and logging and manufacturing, construction employees in construction, and nonsupervisory employees in the service-providing industries.

³ The indexes of aggregate weekly hours are calculated by dividing the current month's estimates of aggregate hours by the corresponding annual average aggregate hours.

⁴ The indexes of aggregate weekly payrolls are calculated by dividing the current month's estimates of aggregate weekly payrolls by the corresponding annual average aggregate weekly payrolls.

⁵ Figures are the percent of industries with employment increasing plus one-half of the industries with unchanged employment, where 50 percent indicates an equal balance between industries with increasing and decreasing employment.

p Preliminary

NOTE: Data have been revised to reflect March 2025 benchmark levels and updated seasonal adjustment factors.

Frequently Asked Questions about Employment and Unemployment Estimates

1. Why are there two monthly measures of employment?

The household survey and establishment survey both produce sample-based estimates of employment, and both have strengths and limitations. The establishment survey employment series has a smaller margin of error on the measurement of month-to-month change than the household survey because of its much larger sample size. An over-the-month employment change of about 122,000 is statistically significant in the establishment survey, while the threshold for a statistically significant change in the household survey is about 650,000. However, the household survey has a more expansive scope than the establishment survey because it includes self-employed workers whose businesses are unincorporated, unpaid family workers, agricultural workers, and private household workers, who are excluded by the establishment survey. The household survey also provides estimates of employment for demographic groups. For more information on the differences between the two surveys, please visit www.bls.gov/web/empsit/ces_cps_trends.htm.

2. Are undocumented immigrants counted in the surveys?

It is likely that both surveys include at least some undocumented immigrants. However, neither the establishment nor the household survey is designed to identify the legal status of workers. Therefore, it is not possible to determine how many are counted in either survey. The establishment survey does not collect data on the legal status of workers. The household survey does include questions which identify the foreign and native born, but it does not include questions about the legal status of the foreign born. Data on the foreign and native born are published each month in table A-7 of The Employment Situation news release.

3. Why does the establishment survey have revisions?

The establishment survey revises published estimates to improve its data series by incorporating additional information that was not available at the time of the initial publication of the estimates. The establishment survey revises its initial monthly estimates twice, in the immediately succeeding 2 months, to incorporate additional sample receipts from respondents in the survey and recalculated seasonal adjustment factors. For more information on the monthly revisions, please visit www.bls.gov/web/empsit/cestn.htm#Revisions-Between-Preliminary-and-Final-Data.

On an annual basis, the establishment survey incorporates a benchmark revision that re-anchors estimates to nearly complete employment counts available from unemployment insurance tax records. The benchmark helps to control for sampling and modeling errors in the estimates. For more information on the annual benchmark revision, please visit www.bls.gov/web/empsit/cesbmart.htm.

4. Does the establishment survey sample include small firms?

Yes. About 46 percent of the establishment survey sample is comprised of business establishments with fewer than 20 employees. The establishment survey sample is designed to maximize the reliability of the statewide total nonfarm employment estimate; firms from all states, size classes, and industries are appropriately sampled to achieve that goal.

5. Does the establishment survey account for employment from new businesses?

Yes. Monthly establishment survey estimates include an adjustment to account for the net employment change generated by business births and deaths. The adjustment comes from an econometric model that forecasts the monthly net jobs impact of business births and deaths based on the actual past values of the net impact that can be observed with a lag from the Quarterly Census of Employment and Wages. The establishment survey uses modeling rather than sampling for this purpose because the survey is not immediately able to bring new businesses into the sample. There is an unavoidable lag between the birth of a new firm and its appearance on the sampling frame and availability for selection. BLS adds new businesses to the survey twice a year. More information on business births and deaths in the establishment survey is available at www.bls.gov/web/empsit/cesbd.htm.

6. Is the count of unemployed people limited to just those receiving unemployment insurance benefits?

No. The estimate of unemployment is based on a monthly sample survey of households. All people who are without jobs and are actively seeking and available to work are included among the unemployed. (People on temporary layoff are included even if they do not actively seek work.) There is no requirement or question relating to unemployment insurance benefits in the monthly survey.

7. Does the official unemployment rate exclude people who want a job but are not currently looking for work?

Yes. However, there are separate estimates of people outside the labor force who want a job, including those who are not currently looking because they believe no jobs are available (discouraged workers). In addition, alternative measures of labor underutilization (some of which include discouraged workers and other groups not officially counted as unemployed) are published each month in table A-15 of The Employment Situation news release. For more information about these alternative measures, please visit www.bls.gov/cps/lfcharacteristics.htm#altmeasures.

8. How can unusually severe weather affect employment and hours estimates?

In the establishment survey, the reference period is the pay period that includes the 12th of the month. Unusually severe weather is more likely to have an impact on average weekly hours than on employment. Average weekly hours are estimated for paid time during the pay period, including pay for holidays, sick leave, or other time off. The impact of severe weather on hours estimates typically, but not always, results in a reduction in average weekly hours. For example, some employees may be off work for part of the pay period and not receive pay for the time missed, while some workers, such as those dealing with cleanup or repair, may work extra hours.

It is not possible to precisely quantify the effect of extreme weather on payroll employment estimates. In order for severe weather conditions to reduce employment estimates, employees have to be off work without pay for the entire pay period. Employees who receive pay for any part of the pay period, even 1 hour, are counted in the payroll employment figures. For more information on how often employees are paid, please visit www.bls.gov/ces/publications/length-pay-period.htm.

In the household survey, the reference period is generally the calendar week that includes the 12th of the month. People who miss the entire week's work for weather-related events are counted as employed whether or not they are paid for the time off. The household survey collects data on the number of people who had a job but were not at work due to bad weather. It also provides a measure of the number of people who usually work full time but had reduced hours due to bad weather.

Current and historical data are available on the household survey's most requested statistics page, please visit data.bls.gov/toppicks?survey=ln.

Technical Note

This news release presents statistics from two major surveys, the Current Population Survey (CPS; household survey) and the Current Employment Statistics survey (CES; establishment survey). The household survey provides information on the labor force, employment, and unemployment that appears in the "A" tables, marked HOUSEHOLD DATA. It is a sample survey of about 60,000 eligible households conducted by the U.S. Census Bureau for the U.S. Bureau of Labor Statistics (BLS).

The establishment survey provides information on employment, hours, and earnings of employees on nonfarm payrolls; the data appear in the "B" tables, marked ESTABLISHMENT DATA. BLS collects these data each month from the payroll records of a sample of nonagricultural business establishments. Each month the CES program surveys about 119,000 businesses and government agencies, representing approximately 622,000 individual worksites, in order to provide detailed industry data on employment, hours, and earnings of workers on nonfarm payrolls. The active sample includes approximately 26 percent of all nonfarm payroll jobs.

For both surveys, the data for a given month relate to a particular week or pay period. In the household survey, the reference period is generally the calendar week that contains the 12th day of the month. In the establishment survey, the reference period is the pay period including the 12th, which may or may not correspond directly to the calendar week.

Coverage, definitions, and differences between surveys

Household survey. The sample is selected to reflect the entire civilian noninstitutional population. Based on responses to a series of questions on work and job search activities, each person 16 years and over in a sample household is classified as employed, unemployed, or not in the labor force.

People are classified as *employed* if they did any work at all as paid employees during the reference week; worked in their own business, profession, or on their own farm; or worked without pay at least 15 hours in a family business or farm. People are also counted as employed if they were temporarily absent from their jobs because of illness, bad weather, vacation, labor-management disputes, or personal reasons.

People are classified as *unemployed* if they meet all of the following criteria: they had no employment during the reference week; they were available for work at that time; and they made specific active efforts to find employment sometime during the 4-week period ending with the reference week. People laid off from a job and expecting recall need not be looking for work to be counted as unemployed. The unemployment data derived from the household survey in no way depend upon the eligibility for or receipt of unemployment insurance benefits.

The *civilian labor force* is the sum of the employed and unemployed. Those people not classified as employed or unemployed are *not in the labor force*. The

unemployment rate is the number unemployed as a percent of the labor force. The *labor force participation rate* is the labor force as a percent of the population, and the *employment-population ratio* is the employed as a percent of the population. Additional information about the household survey can be found at www.bls.gov/cps/documentation.htm.

Establishment survey. The sample establishments are drawn from private nonfarm businesses such as factories, offices, and stores, as well as from federal, state, and local government entities. *Employees on nonfarm payrolls* are those who worked or received pay for any part of the reference pay period, including people on paid leave. People are counted in each job they hold. *Hours and earnings* data are produced for the private sector for all employees and for production and nonsupervisory employees. *Production and nonsupervisory* employees are defined as production and related employees in manufacturing and mining and logging, construction workers in construction, and non-supervisory employees in private service-providing industries.

Industries are classified on the basis of an establishment's principal activity in accordance with the 2022 version of the North American Industry Classification System. Additional information about the establishment survey can be found at www.bls.gov/ces/.

Differences in employment estimates. The numerous conceptual and methodological differences between the household and establishment surveys result in important distinctions in the employment estimates derived from the surveys. Among these are:

- The household survey includes agricultural workers, self-employed workers whose businesses are unincorporated, unpaid family workers, and private household workers among the employed. These groups are excluded from the establishment survey.
- The household survey includes people on unpaid leave among the employed. The establishment survey does not.
- The household survey is limited to workers 16 years of age and older. The establishment survey is not limited by age.
- The household survey has no duplication of individuals, because individuals are counted only once, even if they hold more than one job. In the establishment survey, employees working at more than one job and thus appearing on more than one payroll are counted separately for each appearance.

Seasonal adjustment

Over the course of a year, the size of the nation's labor force and the levels of employment and unemployment undergo regularly occurring fluctuations. These events may result from seasonal changes in weather, major holidays, and the opening and closing of schools. The effect of such seasonal variation can be very large.

Because these seasonal events follow a more or less regular pattern each year, their influence on the level of a series can be tempered by adjusting for regular seasonal variation. These adjustments make nonseasonal developments, such as declines in employment or increases in the participation of women in the labor force, easier to spot. For example, in the household survey, the large number of youth entering the labor force each June is likely to obscure any other changes that have taken place relative to May, making it difficult to determine if the level of economic activity has risen or declined. Similarly, in the establishment survey, payroll employment in education declines by about 20 percent at the end of the spring term and later rises with the start of the fall term, obscuring the underlying employment trends in the industry. Because seasonal employment changes at the end and beginning of the school year can be estimated, the statistics can be adjusted to make underlying employment patterns more discernible. The seasonally adjusted figures provide a more useful tool with which to analyze changes in month-to-month economic activity.

Many seasonally adjusted series are independently adjusted in both the household and establishment surveys. However, the adjusted series for many major estimates, such as total payroll employment, employment in most major sectors, total employment, and unemployment are computed by aggregating independently adjusted component series. For example, total unemployment is derived by summing the adjusted series for four major age-sex components; this differs from the unemployment estimate that would be obtained by directly adjusting the total or by combining the duration, reasons, or more detailed age categories. Percentage distributions of unemployment by reason and duration are derived from the sum of the independently seasonally adjusted component series and will not necessarily match calculations made using the seasonally adjusted total unemployment level. Additional information about seasonal adjustment in the household survey can be found at www.bls.gov/cps/documentation.htm#sa.

For both the household and establishment surveys, a concurrent seasonal adjustment methodology is used in which new seasonal factors are calculated each month using all relevant data, up to and including the data for the current month. In the household survey, new seasonal factors are used to adjust only the current month's data. In the establishment survey, however, new seasonal factors are used each month to adjust the three most recent monthly estimates. The prior 2 months are routinely revised to incorporate additional sample reports and recalculated seasonal adjustment factors. In both surveys, 5-year revisions to historical data are made once a year.

Reliability of the estimates

Statistics based on the household and establishment surveys are subject to both sampling and nonsampling error. When a sample, rather than the entire population, is surveyed, there is a chance that the sample estimates may differ from the true population values they represent. The component of this difference that occurs because samples differ by chance is known as *sampling error*, and its variability is measured by the standard error of the estimate. There is about a 90-percent chance, or level of confidence, that an estimate based on a sample will differ by no more than 1.6 standard errors from the true population value because of sampling error. BLS analyses are generally conducted at the 90-percent level of confidence.

For example, the confidence interval for the monthly change in total nonfarm employment from the establishment survey is on the order of plus or minus 122,000. Suppose the estimate of nonfarm employment increases by 50,000 from one month to the next. The 90-percent confidence interval on the monthly change would range from -72,000 to +172,000 (50,000 +/- 122,000). These figures do not mean that the sample results are off by these magnitudes, but rather that there is about a 90-percent chance that the true over-the-month change lies within this interval. Since this range includes values of less than zero, we could not say with confidence that nonfarm employment had, in fact, increased that month. If, however, the reported nonfarm employment rise was 250,000, then all of the values within the 90-percent confidence interval would be greater than zero. In this case, it is likely (at least a 90-percent chance) that nonfarm employment had, in fact, risen that month. At an unemployment rate of around 6.0 percent, the 90-percent confidence interval for the monthly change in unemployment as measured by the household survey is about +/- 425,000, and for the monthly change in the unemployment rate it is about +/- 0.3 percentage point.

In general, estimates involving many individuals or establishments have lower standard errors (relative to the size of the estimate) than estimates which are based on a small number of observations. The precision of estimates also is improved when the data are cumulated over time, such as for quarterly and annual averages.

The household and establishment surveys are also affected by *nonsampling error*, which can occur for many reasons, including the failure to sample a segment of the population, inability to obtain information for all respondents in the sample, inability or unwillingness of respondents to provide correct information on a timely basis, mistakes made by respondents, and errors made in the collection or processing of the data.

For example, in the establishment survey, estimates for the most recent 2 months are based on incomplete returns; for this reason, these estimates are labeled preliminary in the tables. It is only after two successive revisions to a monthly estimate, when nearly all sample reports have been received, that the estimate is considered final.

Another major source of nonsampling error in the establishment survey is the inability to capture, on a timely basis, employment generated by new firms. To correct for this systematic underestimation of employment growth, an estimation procedure with two components is used to account for business births. The first component excludes employment losses from business deaths from sample-based estimation in order to offset the missing employment gains from business births. This is incorporated into the sample-based estimation procedure by simply not reflecting sample units going out of business, but imputing to them the same employment trend as the other firms in the sample. This procedure accounts for most of the net birth/death employment.

The second component is an ARIMA time series model designed to estimate the residual net birth-death employment not accounted for by the imputation. The historical time series used in the ARIMA model is derived from the unemployment insurance universe micro-level database and reflects the actual residual net of births and deaths over the past 5 years. In addition to this time series of actual residual net of births and deaths series, the ARIMA-based component of the birth-death model includes current sample information to inform the forecasts. More information on business births and deaths in the establishment survey is available at www.bls.gov/web/emp/sit/cesbd.htm.

The sample-based estimates from the establishment survey are adjusted once a year (on a lagged basis) to universe counts of payroll employment obtained from administrative records of the unemployment insurance program. The difference between the March sample-based employment estimates and the March universe counts is known as a benchmark revision, and serves as a rough proxy for total survey error. Benchmarks also incorporate changes in the classification of industries when necessary. The absolute average benchmark revision for total nonfarm employment over the prior 10 years is 0.2 percent. Over this time, revisions ranged from -0.4 percent to 0.3 percent.

Not in labor force.....	86,380	88,413	31,369	32,162	55,011	56,250

NOTE: Veterans served on active duty in the U.S. Armed Forces and were not on active duty at the time of the survey. Nonveterans never served on active duty in the U.S. Armed Forces. Veterans could have served anywhere in the world during these periods of service: Gulf War era II (September 2001-present), Gulf War era I (August 1990-August 2001), Vietnam era (August 1964-April 1975), Korean War (July 1950-January 1955), World War II (December 1941-December 1946), and other service periods (all other time periods). Veterans who served in more than one wartime period are classified only in the most recent one. Veterans who served during one of the selected wartime periods and another period are classified only in the wartime period. Dash indicates no data or data that do not meet publication criteria (values not shown where base is less than 75,000).

¹ Includes self-employed workers whose businesses are incorporated.

² Refers to those who worked 1 to 34 hours during the survey reference week and excludes employed people who were absent from their jobs for the entire week.

³ Refers to those who worked 1 to 34 hours during the reference week for an economic reason such as slack work or unfavorable business conditions, inability to find full-time work, or seasonal declines in demand.

⁴ Refers to people who usually work part time for noneconomic reasons such as childcare problems, family or personal obligations, school or training, retirement or Social Security limits on earnings, and other reasons. This excludes people who usually work full time but worked only 1 to 34 hours during the reference week for reasons such as vacations, holidays, illness, and bad weather.

- Data not available.

NOTE: Detail for the seasonally adjusted data shown in this table will not necessarily add to totals because of the independent seasonal adjustment of the various series. January 2026 estimates were revised to incorporate updated population estimates. For additional information, see <https://www.bls.gov/cps/documentation.htm#pop>. 55 years and over.....	17,689	17,768	18,058	17,614	–	17,675	17,628	17,795	17,948
MARITAL STATUS									
Married men, spouse present ¹	45,715	45,188	45,071	45,825	–	46,308	46,289	45,388	45,199
Married women, spouse present ¹	37,527	37,038	37,601	37,351	–	37,405	37,254	37,119	37,413
Women who maintain families ²	10,245	10,495	10,409	–	–	–	–	–	–
FULL- OR PART-TIME STATUS									
Full-time workers ³	133,372	132,786	133,085	134,618	–	134,325	135,215	134,441	134,341
Part-time workers ⁴	29,172	28,884	29,069	28,521	–	29,452	28,712	28,727	28,478
MULTIPLE JOBHOLDERS									
Total multiple jobholders.....	9,036	8,577	8,510	8,859	–	9,292	8,848	8,723	8,371
Percent of total employed.....	5.6	5.3	5.2	5.4	–	5.7	5.4	5.3	5.1
SELF-EMPLOYMENT									
Self-employed workers, incorporated.....	6,911	6,778	7,030	–	–	–	–	–	–
Self-employed workers, unincorporated.....	9,556	9,519	9,433	9,712	–	10,237	9,803	9,812	9,597

¹ Beginning with data for January 2020, refers to people in both opposite-sex and same-sex married couples. Prior to January 2020, referred to people in opposite-sex married couples only.

² Beginning with data for January 2020, refers to female householders residing with one or more family members, but not a spouse of either sex. Prior to January 2020, referred to female householders residing with one or more family members, but not an opposite-sex spouse.

³ Employed full-time workers are people who usually work 35 hours or more per week.

⁴ Employed part-time workers are people who usually work less than 35 hours per week.

– Data not available.

NOTE: Detail for the seasonally adjusted data shown in this table will not necessarily add to totals because of the independent seasonal adjustment of the various series. January 2026 estimates were revised to incorporate updated population estimates. For additional information, see <https://www.bls.gov/cps/documentation.htm#pop>. Data for October 2025 were not collected due to the federal government shutdown.

25 to 54 years.....	1,838	2,056	2,132	3.6	–	4.0	3.9	4.0	4.1
25 to 34 years.....	815	949	842	4.6	–	5.2	4.6	5.3	4.7
35 to 44 years.....	615	561	653	3.5	–	3.4	3.7	3.1	3.6
45 to 54 years.....	408	545	637	2.6	–	3.2	3.1	3.4	4.0
55 years and over.....	551	577	572	3.0	–	2.9	3.0	3.1	3.1
MARITAL STATUS									
Married men, spouse present ¹	1,016	1,009	1,019	2.2	–	2.4	2.1	2.2	2.2
Married women, spouse present ¹	952	1,116	1,136	2.5	–	2.7	2.6	2.9	2.9
Women who maintain families ²	617	609	601	5.7	–	6.2	5.7	5.5	5.5
FULL- OR PART-TIME STATUS									
Full-time workers ³	5,814	5,961	6,059	4.1	–	4.5	4.3	4.2	4.3
Part-time workers ⁴	1,312	1,437	1,545	4.4	–	4.8	4.6	4.8	5.1

¹ Beginning with data for January 2020, refers to people in both opposite-sex and same-sex married couples. Prior to January 2020, referred to people in opposite-sex married couples only.

² Data are not seasonally adjusted. Beginning with data for January 2020, refers to female householders residing with one or more family members, but not a spouse of either sex. Prior to January 2020, referred to female householders residing with one or more family members, but not an opposite-sex spouse.

³ Full-time workers are unemployed people who have expressed a desire to work full time (35 hours or more per week) or are on layoff from full-time jobs.

⁴ Part-time workers are unemployed people who have expressed a desire to work part time (less than 35 hours per week) or are on layoff from part-time jobs.

NOTE: Detail for the seasonally adjusted data shown in this table will not necessarily add to totals because of the independent seasonal adjustment of the various series. January 2026 estimates were revised to incorporate updated population estimates. For additional information, see <https://www.bls.gov/cps/documentation.htm#pop>. Data for October 2025 were not collected due to the federal government shutdown.

[Percent]

Measure	Not seasonally adjusted			Seasonally adjusted					
	Feb. 2025	Jan. 2026	Feb. 2026	Feb. 2025	Oct. 2025	Nov. 2025	Dec. 2025	Jan. 2026	Feb. 2026
U-1 People unemployed 15 weeks or longer, as a percent of the civilian labor force.....	1.6	1.8	1.9	1.5	–	1.8	1.8	1.8	1.8
U-2 Job losers and people who completed temporary jobs, as a percent of the civilian labor force.....	2.2	2.4	2.4	2.0	–	2.1	2.0	2.1	2.1
U-3 Total unemployed, as a percent of the civilian labor force (official unemployment rate).....	4.5	4.7	4.7	4.2	–	4.5	4.4	4.3	4.4
U-4 Total unemployed plus discouraged workers, as a percent of the civilian labor force plus discouraged workers.....	4.7	5.0	4.9	4.4	–	4.9	4.6	4.6	4.6
U-5 Total unemployed, plus discouraged workers, plus all other people marginally attached to the labor force, as a percent of the civilian labor force plus all people marginally attached to the labor force.....	5.4	5.7	5.6	5.1	–	5.5	5.3	5.2	5.3
U-6 Total unemployed, plus all people marginally attached to the labor force, plus total employed part time for economic reasons, as a percent of the civilian labor force plus all people marginally attached to the labor force.....	8.4	8.8	8.3	8.0	–	8.7	8.4	8.1	7.9

NOTE: People marginally attached to the labor force are those who currently are neither working nor looking for work but indicate that they want and are available for a job and have looked for work sometime in the past 12 months. Discouraged workers, a subset of the marginally attached, have given a job-market related reason for not currently looking for work. People employed part time for economic reasons are those who want and are available for full-time work but have had to settle for a part-time schedule. January 2026 estimates were revised to incorporate updated population estimates. For additional information, see <https://www.bls.gov/cps/documentation.htm#pop>. Data for October 2025 were not collected due to the federal government shutdown.

HOUSEHOLD DATA

Table A-16. People not in the labor force and multiple jobholders by sex, not seasonally adjusted

[Numbers in thousands]

Category	Total		Men		Women	
	Feb. 2025	Feb. 2026	Feb. 2025	Feb. 2026	Feb. 2025	Feb. 2026
NOT IN THE LABOR FORCE						
Total not in the labor force.....	102,731	104,560	43,297	43,750	59,435	60,810
People who currently want a job.....	5,809	5,880	2,697	2,874	3,112	3,005
Marginally attached to the labor force ¹	1,733	1,626	911	868	822	758
Discouraged workers ²	463	352	329	231	134	121
Other people marginally attached to the labor force ³	1,270	1,274	582	636	687	637
MULTIPLE JOBHOLDERS						
Total multiple jobholders ⁴	9,036	8,510	4,283	4,202	4,753	4,308
Percent of total employed.....	5.6	5.2	5.0	5.0	6.2	5.5
Primary job full time, secondary job part time.....	5,371	4,732	2,690	2,571	2,681	2,160
Primary and secondary jobs both part time.....	2,138	2,193	785	764	1,353	1,428
Primary and secondary jobs both full time.....	404	412	244	306	160	106
Hours vary on primary or secondary job.....	1,058	1,120	537	526	522	594

¹ Data refer to people who want a job, have searched for work during the prior 12 months, and were available to take a job during the reference week, but had not looked for work in the past 4 weeks.

² Includes those who did not actively look for work in the prior 4 weeks for reasons such as thinks no work available, could not find work, lacks schooling or training, employer thinks too young or old, and other types of discrimination.

³ Includes those who did not actively look for work in the prior 4 weeks for such reasons as school or family responsibilities, ill health, and transportation problems, as well as a number for whom reason for nonparticipation was not determined.

⁴ Includes a small number of people who work part time on their primary job and full time on their secondary job(s), not shown separately.

NOTE: Updated population controls are introduced annually with the release of January data.

¹ The indexes of aggregate weekly hours are calculated by dividing the current month's estimates of aggregate hours by the corresponding 2007 annual average aggregate hours. Aggregate hours estimates are the product of estimates of average weekly hours and employment.

² The indexes of aggregate weekly payrolls are calculated by dividing the current month's estimates of aggregate weekly payrolls by the corresponding 2007 annual average aggregate weekly payrolls. Aggregate payrolls estimates are the product of estimates of average hourly earnings, average weekly hours, and employment.

BLS State* Press Release Highlights— February 2026
Released April 22, 2026

Unemployment Rates among the 10 largest states:

- Florida tied with New York for the 6th lowest unemployment rate (4.6 percent)
- Georgia had the lowest unemployment rate (3.6 percent)
- California had the highest unemployment rate (5.4 percent)

Unemployment Rates among all states:

- Florida tied with Arizona, New York, and Rhode Island for the 33rd lowest unemployment rate (4.6 percent)
- Hawaii tied with South Dakota for the lowest unemployment rate (2.3 percent)
- District of Columbia had the highest unemployment rate (6.5 percent)

Job Growth among the 10 largest states (over-the-year change):

- Florida lost the most jobs (-36,700 jobs)
- California gained the most jobs (+120,500 jobs)

Job Growth among all states (over-the-year change):

- Florida lost the 4th most jobs (-36,700 jobs)
- California gained the most jobs (+120,500 jobs)
- Maryland lost the most jobs (-52,700 jobs)

Job Growth Rate among the 10 largest states (over-the-year change):

- Florida had the slowest growth rate (-0.4 percent)
- California tied with North Carolina for the fastest growth rate (+0.7 percent)

Job Growth Rate among all states (over-the-year change):

- Florida tied with Indiana and West Virginia for the 10th slowest growth rate (-0.4 percent)
- Nevada had the fastest growth rate (+2.2 percent)
- District of Columbia had the slowest growth rate (-5.5 percent)

*Including District of Columbia

February 2026 Over-the-Month Change in Job Counts

Job Growth among the 10 largest states (over-the-month change):

- Florida gained the most jobs (+1,800 jobs)
- New York lost the most jobs (-22,000 jobs)

Job Growth among all states (over-the-month change):

- Florida gained the 5th most jobs (+1,800 jobs)
- Arizona gained the most jobs (+11,000 jobs)
- New York lost the most jobs (-22,000 jobs)

Job Growth Rate among the 10 largest states (over-the-month change):

- Florida had the fastest growth rate (< +0.1 percent)
- Illinois tied with Pennsylvania for the slowest growth rate (-0.3 percent)

Job Growth Rate among all states (over-the-month change):

- Florida tied with New Hampshire and Utah for the 12th fastest growth rate (< +0.1 percent)
- Wyoming had the fastest growth rate (+0.4 percent)
- Nebraska had the slowest growth rate (-0.6 percent)

*Including District of Columbia

NEWS RELEASE

BUREAU OF LABOR STATISTICS
U. S. D E P A R T M E N T O F L A B O R

For release 10:00 a.m. (ET) Wednesday, April 22, 2026

USDL-26-0651

Technical information:

Employment: (202) 691-6559 • sminfo@bls.gov • www.bls.gov/sae
Unemployment: (202) 691-6392 • lausinfo@bls.gov • www.bls.gov/lau

Media contact: (202) 691-5902 • PressOffice@bls.gov

STATE EMPLOYMENT AND UNEMPLOYMENT — FEBRUARY 2026

Unemployment rates were higher in February in 1 state and stable in 49 states and the District of Columbia, the U.S. Bureau of Labor Statistics reported today. Thirteen states and the District had jobless rate increases from a year earlier, 2 states had decreases, and 35 states had little change. The national unemployment rate, 4.4 percent, changed little over the month but was 0.2 percentage point higher than in February 2025.

In February 2026, nonfarm payroll employment decreased in 2 states, increased in 1 state, and was essentially unchanged in 47 states and the District of Columbia. Over the year, nonfarm payroll employment decreased in 2 states and the District, increased in 2 states, and was essentially unchanged in 46 states.

This news release presents statistics from two monthly programs. The civilian labor force and unemployment data are modeled based largely on a survey of households. These data pertain to people by where they reside. The employment data are from an establishment survey that measures nonfarm employment, hours, and earnings by industry. These data pertain to jobs on payrolls defined by where the establishments are located. For more information about the concepts and statistical methodologies used by these two programs, see the Technical Note.

Unemployment

Hawaii and South Dakota had the lowest jobless rates in February, 2.3 percent each. The District of Columbia had the highest unemployment rate, 6.5 percent. The next highest rates were in California and Delaware, 5.4 percent each. In total, 21 states had unemployment rates lower than the U.S. figure of 4.4 percent, 6 states and the District had higher rates, and 23 states had rates that were not appreciably different from that of the nation. (See tables A and 1 and map 1.)

In February, Florida had the only unemployment rate change (+0.1 percentage point). The remaining 49 states and the District of Columbia had jobless rates that were not notably different from those of a month earlier, though some had changes that were at least as large numerically as the significant change. (See table B.)

Thirteen states and the District of Columbia had unemployment rate increases from February 2025, the largest of which was in Delaware (+1.1 percentage points). The only over-the-year rate decreases occurred in Ohio (-0.7 percentage point) and Indiana (-0.5 point). Thirty-five states had jobless rates that were not notably different from those of a year earlier, though some had changes that were at least as large numerically as the significant changes. (See table C.)

Nonfarm Payroll Employment

In February 2026, nonfarm payroll employment decreased in 2 states, increased in 1 state, and was essentially unchanged in 47 states and the District of Columbia. Employment decreased in Illinois (-17,800, or -0.3 percent) and Nebraska (-6,500, or -0.6 percent). Employment increased in Arizona (+11,000, or +0.3 percent). (See tables D and 3.)

Over the year, nonfarm payroll employment decreased in 2 states and the District of Columbia, increased in 2 states, and was essentially unchanged in 46 states. Employment decreased in Maryland (-52,700, or -1.9 percent), the District (-42,200, or -5.5 percent), and Iowa (-19,200, or -1.2 percent). The job gains occurred in California (+120,500, or +0.7 percent) and Nevada (+34,500, or +2.2 percent). (See table E and map 2.)

The Metropolitan Area Employment and Unemployment news release for February is scheduled to be released on Wednesday, April 29, 2026, at 10:00 a.m. (ET). The State Employment and Unemployment news release for March is scheduled to be released on Wednesday, May 6, 2026, at 10:00 a.m. (ET).

^P = preliminary.

Table D. States with statistically significant employment changes from January 2026 to February 2026, seasonally adjusted

State	January 2026	February 2026 ^P	Over-the-month change ^P	
			Level	Percent
Arizona	3,262,300	3,273,300	11,000	0.3
Illinois	6,155,000	6,137,200	-17,800	-3
Nebraska	1,059,900	1,053,400	-6,500	-6

^P = preliminary.

Table E. States with statistically significant employment changes from February 2025 to February 2026, seasonally adjusted

State	February 2025	February 2026 ^P	Over-the-year change ^P	
			Level	Percent
California	18,003,900	18,124,400	120,500	0.7
District of Columbia	762,200	720,000	-42,200	-5.5
Iowa	1,595,600	1,576,400	-19,200	-1.2
Maryland	2,842,100	2,789,400	-52,700	-1.9
Nevada	1,570,700	1,605,200	34,500	2.2

^P = preliminary.

Technical Note

This news release presents civilian labor force and unemployment data for states and selected substate areas from the Local Area Unemployment Statistics (LAUS) program (tables 1 and 2). Also presented are nonfarm payroll employment estimates by state and industry supersector from the Current Employment Statistics (CES) program (tables 3 and 4). The LAUS and CES programs are both federal-state cooperative endeavors.

Civilian labor force and unemployment—from the LAUS program

Definitions. The civilian labor force and unemployment data are based on the same concepts and definitions as those used for the official national estimates obtained from the Current Population Survey (CPS), a sample survey of households that is conducted for the Bureau of Labor Statistics (BLS) by the U.S. Census Bureau. The LAUS program measures employed people and unemployed people on a place-of-residence basis. The universe for each is the civilian noninstitutional population 16 years of age and older. Employed people are those who did any work at all for pay or profit in the reference week (typically the week including the 12th of the month) or worked 15 hours or more without pay in a family business or farm, plus those not working who had a job from which they were temporarily absent, whether or not paid, for such reasons as bad weather, labor-management dispute, illness, or vacation.

Unemployed people are those who were not employed during the reference week (based on the definition above), had actively looked for a job sometime in the 4-week period ending with the reference week, and were currently available for work; people on layoff expecting recall need not be looking for work to be counted as unemployed. The civilian labor force is the sum of employed and unemployed people. The unemployment rate is the number of unemployed as a percent of the civilian labor force.

Method of estimation. Estimates for 48 states, the District of Columbia, the Los Angeles-Long Beach-Glendale metropolitan division, New York City, and the balances of California and New York State are produced using time-series models. This method, which underwent substantial enhancement at the beginning of 2021, utilizes data from several sources, including the CPS, the CES, and state unemployment insurance (UI) programs. Estimates for the state of California are derived by summing the estimates for the Los Angeles-Long Beach-Glendale metropolitan division and the balance of California. Similarly, estimates for New York State are derived by summing the estimates for New York City and the balance of New York State. Estimates for five additional substate areas (the Cleveland, Detroit-Warren-Dearborn, and Seattle-Tacoma-Bellevue metropolitan areas and the Chicago-Naperville-Schaumburg and Miami-Miami Beach-Kendall metropolitan divisions) and their respective balances of state are produced using a similar model-based approach. The small number of areas and divisions selected for LAUS time-series modeling reflect the delineations per U.S. Office of Management and Budget Bulletin No. 23-01.

Each month, estimates for the nine census divisions first are modeled using inputs from the CPS only and controlled to the national totals. State estimates then are controlled to their respective census division totals. Substate and balance-of-state estimates for the five areas noted above also are controlled to their respective state totals. This tiered process of controlling model-based estimates to the U.S. totals is called real-time benchmarking. Estimates for Puerto Rico are derived from a monthly household survey similar to the CPS. A more detailed description of the estimation procedures is available from BLS upon request.

Annual revisions. Civilian labor force and unemployment data for prior years reflect adjustments made after the end of each year. The adjusted estimates reflect updated population data from the U.S. Census Bureau, any revisions in the other data sources, and model re-estimation. In most years, historical data for the most recent five years are revised near the beginning of each calendar year, prior to the release of January estimates. With the implementation of synthetic intercensal population controls in 2025 to smooth decennial discontinuities, historical data were re-estimated back to the series beginnings in 1976, 1990, or 1994. For more information, see www.bls.gov/lau/geography-and-data-changes-in-2025.htm.

Seasonal adjustment. The LAUS models decompose the estimates of employed and unemployed people into trend, seasonal, and irregular components. The benchmarked signals of employed and unemployed people first are adjusted using an X-11 type of seasonal adjustment filter. The adjusted data then are smoothed using a Reproducing Kernel Hilbert Space (RKHS) filter. The smoothed-seasonally adjusted estimates of employed and unemployed people are summed to derive the civilian labor force, and the unemployment rate then is calculated as the unemployed percent of the civilian labor force. The resulting smoothed-seasonally adjusted unemployment rate estimates are analyzed in this news release and published on the BLS website.

During estimation for the current year, the smoothed-seasonally adjusted estimates for a given month are created using an asymmetric filter that incorporates information from previous observations only. For annual revisions, historical data are smoothed using a two-sided filter.

Employment—from the CES program

Definitions. Employment data refer to people on establishment payrolls who receive pay for any part of the pay period that includes the 12th of the month. People are counted at their place of work rather than at their place of residence; those appearing on more than one payroll are counted on each payroll. Industries are classified on the basis of their principal activity in accordance with the 2022 version of the North American Industry Classification System.

Method of estimation. CES State and Area employment data are produced using several estimation procedures. Where possible, these data are produced using a "weighted link

relative" estimation technique in which a ratio of current month weighted employment to that of the previous-month weighted employment is computed from a sample of establishments reporting for both months. The estimates of employment for the current month are then obtained by multiplying these ratios by the previous month's employment estimates. The weighted link relative technique is utilized for data series where the sample size meets certain statistical criteria. For some employment series, the estimates are produced with a model that uses direct sample estimates (described above) combined with other regressors to compensate for smaller sample sizes.

Annual revisions. Employment estimates are adjusted annually to a complete count of jobs, called benchmarks, derived principally from tax reports that are submitted by employers who are covered under state unemployment insurance (UI) laws. The benchmark information is used to adjust the monthly estimates between the new benchmark and the preceding one and to establish the level of employment for the new benchmark month. Thus, the benchmarking process establishes the level of employment, and the sample is used to measure the month-to-month changes in the level for the subsequent months. Information on recent benchmark revisions is available online at www.bls.gov/web/laus/benchmark.htm.

Seasonal adjustment. Payroll employment data are seasonally adjusted at the statewide expanded supersector level. In some cases, the seasonally adjusted payroll employment total is computed by aggregating the independently adjusted supersector series. In other cases, the seasonally adjusted payroll employment total is independently adjusted. Revisions to historical data for the most recent five years are made once a year, coincident with annual benchmark adjustments.

Payroll employment data are seasonally adjusted concurrently, using all available estimates, including those for the current month, to develop sample-based seasonal factors. Concurrent sample-based factors are created every month for the current month's preliminary estimate as well as the previous month's final estimate.

Caution on aggregating state data. State estimation procedures are designed to produce accurate data for each individual state. BLS independently develops a national employment series; state estimates are not forced to sum to national totals. Each state series is subject to larger relative sampling and nonsampling errors than the national series. Summing state estimates cumulates individual state-level errors and can cause significant distortions at an aggregate level. Due to these statistical limitations, BLS does not compile a "sum-of-states" employment series and cautions users that such a series is subject to a relatively large and volatile error structure.

Reliability of the estimates

The estimates presented in this release are based on sample surveys, administrative data, and modeling and, thus, are subject to sampling and other types of errors. Sampling error is a measure of sampling variability—that is, variation that occurs by chance because a sample rather than the entire population is surveyed. Survey data also are subject to nonsampling errors, such as those which can be introduced into the data collection and processing operations. Estimates not directly derived from sample surveys are subject to additional errors resulting from the specific estimation processes used.

Use of error measures. Changes in state unemployment rates and state nonfarm payroll employment are cited in the analysis of this release only if they have been determined to be statistically significant at the 90-percent confidence level. Furthermore, state unemployment rates for the current month generally are cited only if they have been determined to be significantly different from the U.S. rate at the 90-percent confidence level. The underlying model-based standard error measures for unemployment rates and over-the-month and over-the-year changes in rates are available at www.bls.gov/lau/lastderr.htm. The underlying standard error measures for over-the-month and over-the-year changes in state payroll employment data at the total nonfarm and supersector levels are available at www.bls.gov/web/laus/790stderr.htm. Measures of nonsampling error are not available.

Additional information

Estimates of civilian labor force and unemployment from the LAUS program, as well as nonfarm payroll employment from the CES program, for metropolitan areas and metropolitan divisions are available in the news release Metropolitan Area Employment and Unemployment. Estimates of civilian labor force, employed people, unemployed people, and unemployment rates for approximately 7,600 subnational areas are available online at www.bls.gov/lau/. Employment data from the CES program for states and metropolitan areas are available online at www.bls.gov/sae/. If you are deaf, hard of hearing, or have a speech disability, please dial 7-1-1 to access telecommunications relay services.

¹ Includes mining and logging, information, and other services (except public administration), not shown separately.

² Mining and logging is combined with construction.

³ Missing series (denoted by '-') are not published seasonally adjusted because the seasonal component, which is small relative to the trend-cycle and irregular components, cannot be separated with sufficient precision.

^p Preliminary

NOTE: Data are counts of jobs by place of work. Estimates are currently estimated from 2025 benchmark levels. Estimates subsequent to the current benchmarks are preliminary and will be revised when new information becomes available.
