Florida's March Figures Released

Florida's seasonally adjusted unemployment rate was 4.7 percent in March 2026, up 0.1 percentage point from the February 2026 rate, and up 1.1 percentage points from a year ago. There were 523,000 jobless Floridians out of a labor force of 11,146,000. The U.S. seasonally adjusted unemployment rate was 4.3 percent in March.

Florida's seasonally adjusted total nonagricultural employment was 9,993,200 in March 2026, an increase of 28,100 jobs (+0.3 percent) over the month. The state lost 22,400 jobs over the year, a decrease of 0.2 percent. Nationally, the number of jobs rose 0.2 percent over the year.

United States and Florida Unemployment Rates (seasonally adjusted)

Source: U.S. Department of Labor, Bureau of Labor Statistics, Local Area Unemployment Statistics Program, in cooperation with the Florida Department of Commerce, Bureau of Workforce Statistics and Economic Research.

Florida's Nonagricultural Employment by Industry (Seasonally Adjusted)

- Eight of ten major industries experienced negative over-the-year job growth in March.
- The industry gaining jobs over the year were education and health services (+31,500 jobs, +2.0 percent) and professional and business services (+9,300 jobs, +0.6 percent).
- The industries losing jobs over the year included total government (-12,100 jobs, -1.0 percent); financial activities (-11,500 jobs, -1.7 percent); other services (-10,100 jobs, -2.6 percent); construction (-8,700 jobs, -1.3 percent); trade, transportation, and utilities (-7,900 jobs, -0.4 percent); information (-5,500 jobs, -3.6 percent); manufacturing (-4,500 jobs, -1.0 percent); and leisure and hospitality (-3,000 jobs, -0.2 percent).

Local Area Unemployment Statistics (Not Seasonally Adjusted)

- In March 2026, Miami-Dade County had the state's lowest unemployment rate (2.9 percent), followed by Monroe County (3.1 percent), and Pinellas County, Seminole County and Wakulla County (4.1 percent each).
- Taylor County had the highest unemployment rate (8.4 percent) in Florida in March 2026, followed by Sumter County (7.8 percent), and Hamilton County (6.7 percent).

Area Nonagricultural Employment (Not Seasonally Adjusted)

- In March 2026, 9 of all 25 metro areas in Florida had over-the-year job gains. The areas with the largest gains were the Orlando-Kissimmee-Sanford MSA (+12,400 jobs, +0.8 percent), followed by the Lakeland-Winter Haven MSA (+2,100 jobs, +0.7 percent), the Ocala MSA (+1,400 jobs, +1.1 percent), and the Tallahassee (+1,100 jobs, +0.5 percent).
- Fourteen metro areas in Florida lost jobs over the year in March 2026. The areas losing more than 3,000 jobs were the Fort Lauderdale-Pompano Beach-Sunrise MD (-9,300 jobs, -1.0 percent), the West Palm Beach-Boca Raton-Delray Beach MD (-6,800 jobs, -1.0 percent), the Jacksonville MSA (-6,200 jobs, -0.8 percent), the Cape Coral-Fort Myers MSA (-4,100 jobs, -1.3 percent), and the Naples-Marco Island MSA (-3,800 jobs, -2.1 percent).
- The Sebring MSA and the Panama City-Panama City Beach MSA were unchanged in jobs over the year.

The unemployment and job growth rates are estimates, which are primarily based on surveys created and mandated by the U.S. Bureau of Labor Statistics in cooperation with the Florida Department of Commerce.

The unemployment rate is derived from Florida household surveys conducted by the U.S. Census Bureau under contract with the U.S. Bureau of Labor Statistics. The job growth rate is derived from Florida employer surveys conducted by the U.S. Bureau of Labor Statistics.

Both estimates are revised on a monthly basis. In addition, these estimates are benchmarked (revised) annually based on actual counts from Florida's Reemployment Assistance tax records and other data.

Procedures mandated by the U.S. Bureau of Labor Statistics may result in more variable month-to-month changes. For further information, go to: <https://www.bls.gov/sae/>

The mission of the Florida Department of Commerce is to promote economic prosperity for all Floridians and businesses through successful workforce, community, and economic development strategies. Please visit www.floridajobs.org for more information.

Labor market data for April 2026 will be released on May 22, 2026, at 10:00 A.M.

THE EMPLOYMENT SITUATION — MARCH 2026

Total **nonfarm payroll employment** increased by 178,000 in March, and the **unemployment rate** changed little at 4.3 percent, the U.S. Bureau of Labor Statistics reported today. Job gains occurred in health care, in construction, and in transportation and warehousing. Federal government employment continued to decline.

Chart 1. Unemployment rate, seasonally adjusted, March 2024 – March 2026

Note: Data for October 2025 were not collected due to the federal government shutdown.

Chart 2. Nonfarm payroll employment over-the-month change, seasonally adjusted, March 2024 – March 2026

This news release presents statistics from two monthly surveys. The household survey measures labor force status, including unemployment, by demographic characteristics. The establishment survey measures nonfarm employment, hours, and earnings by industry. For more information about the concepts and statistical methodology used in these two surveys, see the Technical Note.

Household Survey Data

Both the **unemployment rate**, at 4.3 percent, and the number of **unemployed people**, at 7.2 million, changed little in March. These measures also changed little over the year. (See table A-1.)

Among the **major worker groups**, the unemployment rate for people who are Asian (3.7 percent) decreased in March. The jobless rates for adult men (3.8 percent), adult women (4.0 percent), teenagers (13.7 percent), and people who are White (3.6 percent), Black (7.1 percent), or Hispanic (4.8 percent) showed little change over the month. (See tables A-1, A-2, and A-3.)

The number of **long-term unemployed** (those jobless for 27 weeks or more) changed little at 1.8 million in March but is up by 322,000 over the year. The long-term unemployed accounted for 25.4 percent of all unemployed people in March. (See table A-12.)

Both the **labor force participation rate**, at 61.9 percent, and the **employment-population ratio**, at 59.2 percent, changed little in March. These measures also showed little change over the year, after accounting for annual population control adjustments. (See table A-1.)

The number of people employed **part time for economic reasons**, at 4.5 million, changed little in March. These individuals would have preferred full-time employment but were working part time because their hours had been reduced or they were unable to find full-time jobs. (See table A-8.)

The number of people **not in the labor force who currently want a job** changed little at 6.0 million in March. These individuals were not counted as unemployed because they were not actively looking for work during the 4 weeks preceding the survey or were unavailable to take a job. (See table A-1.)

Among those not in the labor force who wanted a job, the number of people **marginally attached to the labor force** increased by 325,000 in March to 1.9 million. These individuals wanted and were available for work and had looked for a job sometime in the prior 12 months but had not looked for work in the 4 weeks preceding the survey. The number of **discouraged workers**, a subset of the marginally attached who believed that no jobs were available for them, increased by 144,000 in March to 510,000. (See Summary table A.)

Establishment Survey Data

Total **nonfarm payroll employment** increased by 178,000 in March, following a decrease in February (-133,000). In March, job gains occurred in health care, in construction, and in transportation and warehousing. Federal government employment continued to decline. Payroll employment had changed little on net over the prior 12 months. (See table B-1.)

Health care added 76,000 jobs in March. Employment in ambulatory health care services rose by 54,000, reflecting an increase of 35,000 in offices of physicians as workers returned from a strike. Employment also increased in hospitals (+15,000). Over the prior 12 months, health care had added an average of 29,000 jobs per month.

Employment in **construction** grew by 26,000 in March but had shown little net change over the prior 12 months.

In March, **transportation and warehousing** added 21,000 jobs, reflecting a gain in couriers and messengers (+20,000). Employment in transportation and warehousing is down by 139,000 since reaching a peak in February 2025.

Employment in **social assistance** continued its upward trend in March (+14,000), primarily in individual and family services (+11,000).

Federal government employment continued to decline in March (-18,000). Since reaching a peak in October 2024, federal government employment is down by 355,000, or 11.8 percent. Federal employees on furlough during the partial government shutdown were counted as employed in the establishment survey because they worked or received (or will receive) pay for the pay period that included the 12th of the month.

Employment in **financial activities** edged down by 15,000 in March, reflecting a loss in finance and insurance (-16,000). Employment in financial activities is down by 77,000 since reaching a peak in May 2025.

Employment showed little change over the month in other major industries, including **mining, quarrying, and oil and gas extraction; manufacturing; wholesale trade; retail trade; information; professional and business services; leisure and hospitality; and other services.**

In March, **average hourly earnings for all employees** on private nonfarm payrolls rose by 9 cents, or 0.2 percent, to \$37.38. Over the year, average hourly earnings have increased by 3.5 percent. In March, average hourly earnings of private-sector **production and nonsupervisory employees** edged up by 5 cents, or 0.2 percent, to \$32.07. (See tables B-3 and B-8.)

The **average workweek for all employees** on private nonfarm payrolls edged down by 0.1 hour to 34.2 hours in March. In manufacturing, the average workweek was unchanged at 40.2 hours, and overtime was also unchanged at 3.0 hours. The average workweek for **production and nonsupervisory employees** on private nonfarm payrolls remained at 33.8 hours. (See tables B-2 and B-7.)

The change in total nonfarm payroll employment for January was revised up by 34,000, from +126,000 to +160,000, and the change for February was revised down by 41,000, from -92,000 to -133,000. With these revisions, employment in January and February combined is 7,000 lower than previously reported. (Monthly revisions result from additional reports received from businesses and government agencies since the last published estimates and from the recalculation of seasonal factors.)

The Employment Situation for April is scheduled to be released on Friday, May 8, 2026, at 8:30 a.m. (ET).

DIFFUSION INDEX (Over 1-month span) ⁵				
Total private (250 industries).....	48.0	51.6	49.2	56.8
Manufacturing (72 industries).....	44.4	45.8	46.5	47.9

¹ Includes other industries, not shown separately.

² Data relate to production employees in mining and logging and manufacturing, construction employees in construction, and nonsupervisory employees in the service-providing industries.

³ The indexes of aggregate weekly hours are calculated by dividing the current month's estimates of aggregate hours by the corresponding annual average aggregate hours.

⁴ The indexes of aggregate weekly payrolls are calculated by dividing the current month's estimates of aggregate weekly payrolls by the corresponding annual average aggregate weekly payrolls.

⁵ Figures are the percent of industries with employment increasing plus one-half of the industries with unchanged employment, where 50 percent indicates an equal balance between industries with increasing and decreasing employment.

p Preliminary

NOTE: Data have been revised to reflect March 2025 benchmark levels and updated seasonal adjustment factors.

Frequently Asked Questions about Employment and Unemployment Estimates

1. Why are there two monthly measures of employment?

The household survey and establishment survey both produce sample-based estimates of employment, and both have strengths and limitations. The establishment survey employment series has a smaller margin of error on the measurement of month-to-month change than the household survey because of its much larger sample size. An over-the-month employment change of about 122,000 is statistically significant in the establishment survey, while the threshold for a statistically significant change in the household survey is about 650,000. However, the household survey has a more expansive scope than the establishment survey because it includes self-employed workers whose businesses are unincorporated, unpaid family workers, agricultural workers, and private household workers, who are excluded by the establishment survey. The household survey also provides estimates of employment for demographic groups. For more information on the differences between the two surveys, please visit www.bls.gov/web/empsit/ces_cps_trends.htm.

2. Are undocumented immigrants counted in the surveys?

It is likely that both surveys include at least some undocumented immigrants. However, neither the establishment nor the household survey is designed to identify the legal status of workers. Therefore, it is not possible to determine how many are counted in either survey. The establishment survey does not collect data on the legal status of workers. The household survey does include questions which identify the foreign and native born, but it does not include questions about the legal status of the foreign born. Data on the foreign and native born are published each month in table A-7 of The Employment Situation news release.

3. Why does the establishment survey have revisions?

The establishment survey revises published estimates to improve its data series by incorporating additional information that was not available at the time of the initial publication of the estimates. The establishment survey revises its initial monthly estimates twice, in the immediately succeeding 2 months, to incorporate additional sample receipts from respondents in the survey and recalculated seasonal adjustment factors. For more information on the monthly revisions, please visit www.bls.gov/web/empsit/cestn.htm#Revisions-Between-Preliminary-and-Final-Data.

On an annual basis, the establishment survey incorporates a benchmark revision that re-anchors estimates to nearly complete employment counts available from unemployment insurance tax records. The benchmark helps to control for sampling and modeling errors in the estimates. For more information on the annual benchmark revision, please visit www.bls.gov/web/empsit/cesbmart.htm.

4. Does the establishment survey sample include small firms?

Yes. About 46 percent of the establishment survey sample is comprised of business establishments with fewer than 20 employees. The establishment survey sample is designed to maximize the reliability of the statewide total nonfarm employment estimate; firms from all states, size classes, and industries are appropriately sampled to achieve that goal.

5. Does the establishment survey account for employment from new businesses?

Yes. Monthly establishment survey estimates include an adjustment to account for the net employment change generated by business births and deaths. The adjustment comes from an econometric model that forecasts the monthly net jobs impact of business births and deaths based on the actual past values of the net impact that can be observed with a lag from the Quarterly Census of Employment and Wages. The establishment survey uses modeling rather than sampling for this purpose because the survey is not immediately able to bring new businesses into the sample. There is an unavoidable lag between the birth of a new firm and its appearance on the sampling frame and availability for selection. BLS adds new businesses to the survey twice a year. More information on business births and deaths in the establishment survey is available at www.bls.gov/web/empsit/cesbd.htm.

6. Is the count of unemployed people limited to just those receiving unemployment insurance benefits?

No. The estimate of unemployment is based on a monthly sample survey of households. All people who are without jobs and are actively seeking and available to work are included among the unemployed. (People on temporary layoff are included even if they do not actively seek work.) There is no requirement or question relating to unemployment insurance benefits in the monthly survey.

7. Does the official unemployment rate exclude people who want a job but are not currently looking for work?

Yes. However, there are separate estimates of people outside the labor force who want a job, including those who are not currently looking because they believe no jobs are available (discouraged workers). In addition, alternative measures of labor underutilization (some of which include discouraged workers and other groups not officially counted as unemployed) are published each month in table A-15 of The Employment Situation news release. For more information about these alternative measures, please visit www.bls.gov/cps/lfcharacteristics.htm#altmeasures.

8. How can unusually severe weather affect employment and hours estimates?

In the establishment survey, the reference period is the pay period that includes the 12th of the month. Unusually severe weather is more likely to have an impact on average weekly hours than on employment. Average weekly hours are estimated for paid time during the pay period, including pay for holidays, sick leave, or other time off. The impact of severe weather on hours estimates typically, but not always, results in a reduction in average weekly hours. For example, some employees may be off work for part of the pay period and not receive pay for the time missed, while some workers, such as those dealing with cleanup or repair, may work extra hours.

It is not possible to precisely quantify the effect of extreme weather on payroll employment estimates. In order for severe weather conditions to reduce employment estimates, employees have to be off work without pay for the entire pay period. Employees who receive pay for any part of the pay period, even 1 hour, are counted in the payroll employment figures. For more information on how often employees are paid, please visit www.bls.gov/ces/publications/length-pay-period.htm.

In the household survey, the reference period is generally the calendar week that includes the 12th of the month. People who miss the entire week's work for weather-related events are counted as employed whether or not they are paid for the time off. The household survey collects data on the number of people who had a job but were not at work due to bad weather. It also provides a measure of the number of people who usually work full time but had reduced hours due to bad weather.

Current and historical data are available on the household survey's most requested statistics page, please visit data.bls.gov/toppicks?survey=ln.

Technical Note

This news release presents statistics from two major surveys, the Current Population Survey (CPS; household survey) and the Current Employment Statistics survey (CES; establishment survey). The household survey provides information on the labor force, employment, and unemployment that appears in the "A" tables, marked HOUSEHOLD DATA. It is a sample survey of about 60,000 eligible households conducted by the U.S. Census Bureau for the U.S. Bureau of Labor Statistics (BLS).

The establishment survey provides information on employment, hours, and earnings of employees on nonfarm payrolls; the data appear in the "B" tables, marked ESTABLISHMENT DATA. BLS collects these data each month from the payroll records of a sample of nonagricultural business establishments. Each month the CES program surveys about 119,000 businesses and government agencies, representing approximately 622,000 individual worksites, in order to provide detailed industry data on employment, hours, and earnings of workers on nonfarm payrolls. The active sample includes approximately 26 percent of all nonfarm payroll jobs.

For both surveys, the data for a given month relate to a particular week or pay period. In the household survey, the reference period is generally the calendar week that contains the 12th day of the month. In the establishment survey, the reference period is the pay period including the 12th, which may or may not correspond directly to the calendar week.

Coverage, definitions, and differences between surveys

Household survey. The sample is selected to reflect the entire civilian noninstitutional population. Based on responses to a series of questions on work and job search activities, each person 16 years and over in a sample household is classified as employed, unemployed, or not in the labor force.

People are classified as *employed* if they did any work at all as paid employees during the reference week; worked in their own business, profession, or on their own farm; or worked without pay at least 15 hours in a family business or farm. People are also counted as employed if they were temporarily absent from their jobs because of illness, bad weather, vacation, labor-management disputes, or personal reasons.

People are classified as *unemployed* if they meet all of the following criteria: they had no employment during the reference week; they were available for work at that time; and they made specific active efforts to find employment sometime during the 4-week period ending with the reference week. People laid off from a job and expecting recall need not be looking for work to be counted as unemployed. The unemployment data derived from the household survey in no way depend upon the eligibility for or receipt of unemployment insurance benefits.

The *civilian labor force* is the sum of the employed and unemployed. Those people not classified as employed or unemployed are *not in the labor force*. The

unemployment rate is the number unemployed as a percent of the labor force. The *labor force participation rate* is the labor force as a percent of the population, and the *employment-population ratio* is the employed as a percent of the population. Additional information about the household survey can be found at www.bls.gov/cps/documentation.htm.

Establishment survey. The sample establishments are drawn from private nonfarm businesses such as factories, offices, and stores, as well as from federal, state, and local government entities. *Employees on nonfarm payrolls* are those who worked or received pay for any part of the reference pay period, including people on paid leave. People are counted in each job they hold. *Hours and earnings* data are produced for the private sector for all employees and for production and nonsupervisory employees. *Production and nonsupervisory* employees are defined as production and related employees in manufacturing and mining and logging, construction workers in construction, and non-supervisory employees in private service-providing industries.

Industries are classified on the basis of an establishment's principal activity in accordance with the 2022 version of the North American Industry Classification System. Additional information about the establishment survey can be found at www.bls.gov/ces/.

Differences in employment estimates. The numerous conceptual and methodological differences between the household and establishment surveys result in important distinctions in the employment estimates derived from the surveys. Among these are:

- The household survey includes agricultural workers, self-employed workers whose businesses are unincorporated, unpaid family workers, and private household workers among the employed. These groups are excluded from the establishment survey.
- The household survey includes people on unpaid leave among the employed. The establishment survey does not.
- The household survey is limited to workers 16 years of age and older. The establishment survey is not limited by age.
- The household survey has no duplication of individuals, because individuals are counted only once, even if they hold more than one job. In the establishment survey, employees working at more than one job and thus appearing on more than one payroll are counted separately for each appearance.

Seasonal adjustment

Over the course of a year, the size of the nation's labor force and the levels of employment and unemployment undergo regularly occurring fluctuations. These events may result from seasonal changes in weather, major holidays, and the opening and closing of schools. The effect of such seasonal variation can be very large.

Because these seasonal events follow a more or less regular pattern each year, their influence on the level of a series can be tempered by adjusting for regular seasonal variation. These adjustments make nonseasonal developments, such as declines in employment or increases in the participation of women in the labor force, easier to spot. For example, in the household survey, the large number of youth entering the labor force each June is likely to obscure any other changes that have taken place relative to May, making it difficult to determine if the level of economic activity has risen or declined. Similarly, in the establishment survey, payroll employment in education declines by about 20 percent at the end of the spring term and later rises with the start of the fall term, obscuring the underlying employment trends in the industry. Because seasonal employment changes at the end and beginning of the school year can be estimated, the statistics can be adjusted to make underlying employment patterns more discernible. The seasonally adjusted figures provide a more useful tool with which to analyze changes in month-to-month economic activity.

Many seasonally adjusted series are independently adjusted in both the household and establishment surveys. However, the adjusted series for many major estimates, such as total payroll employment, employment in most major sectors, total employment, and unemployment are computed by aggregating independently adjusted component series. For example, total unemployment is derived by summing the adjusted series for four major age-sex components; this differs from the unemployment estimate that would be obtained by directly adjusting the total or by combining the duration, reasons, or more detailed age categories. Percentage distributions of unemployment by reason and duration are derived from the sum of the independently seasonally adjusted component series and will not necessarily match calculations made using the seasonally adjusted total unemployment level. Additional information about seasonal adjustment in the household survey can be found at www.bls.gov/cps/documentation.htm#sa.

For both the household and establishment surveys, a concurrent seasonal adjustment methodology is used in which new seasonal factors are calculated each month using all relevant data, up to and including the data for the current month. In the household survey, new seasonal factors are used to adjust only the current month's data. In the establishment survey, however, new seasonal factors are used each month to adjust the three most recent monthly estimates. The prior 2 months are routinely revised to incorporate additional sample reports and recalculated seasonal adjustment factors. In both surveys, 5-year revisions to historical data are made once a year.

Reliability of the estimates

Statistics based on the household and establishment surveys are subject to both sampling and nonsampling error. When a sample, rather than the entire population, is surveyed, there is a chance that the sample estimates may differ from the true population values they represent. The component of this difference that occurs because samples differ by chance is known as *sampling error*, and its variability is measured by the standard error of the estimate. There is about a 90-percent chance, or level of confidence, that an estimate based on a sample will differ by no more than 1.6 standard errors from the true population value because of sampling error. BLS analyses are generally conducted at the 90-percent level of confidence.

For example, the confidence interval for the monthly change in total nonfarm employment from the establishment survey is on the order of plus or minus 122,000. Suppose the estimate of nonfarm employment increases by 50,000 from one month to the next. The 90-percent confidence interval on the monthly change would range from -72,000 to +172,000 (50,000 +/- 122,000). These figures do not mean that the sample results are off by these magnitudes, but rather that there is about a 90-percent chance that the true over-the-month change lies within this interval. Since this range includes values of less than zero, we could not say with confidence that nonfarm employment had, in fact, increased that month. If, however, the reported nonfarm employment rise was 250,000, then all of the values within the 90-percent confidence interval would be greater than zero. In this case, it is likely (at least a 90-percent chance) that nonfarm employment had, in fact, risen that month. At an unemployment rate of around 6.0 percent, the 90-percent confidence interval for the monthly change in unemployment as measured by the household survey is about +/- 425,000, and for the monthly change in the unemployment rate it is about +/- 0.3 percentage point.

In general, estimates involving many individuals or establishments have lower standard errors (relative to the size of the estimate) than estimates which are based on a small number of observations. The precision of estimates also is improved when the data are cumulated over time, such as for quarterly and annual averages.

The household and establishment surveys are also affected by *nonsampling error*, which can occur for many reasons, including the failure to sample a segment of the population, inability to obtain information for all respondents in the sample, inability or unwillingness of respondents to provide correct information on a timely basis, mistakes made by respondents, and errors made in the collection or processing of the data.

For example, in the establishment survey, estimates for the most recent 2 months are based on incomplete returns; for this reason, these estimates are labeled preliminary in the tables. It is only after two successive revisions to a monthly estimate, when nearly all sample reports have been received, that the estimate is considered final.

Another major source of nonsampling error in the establishment survey is the inability to capture, on a timely basis, employment generated by new firms. To correct for this systematic underestimation of employment growth, an estimation procedure with two components is used to account for business births. The first component excludes employment losses from business deaths from sample-based estimation in order to offset the missing employment gains from business births. This is incorporated into the sample-based estimation procedure by simply not reflecting sample units going out of business, but imputing to them the same employment trend as the other firms in the sample. This procedure accounts for most of the net birth/death employment.

The second component is an ARIMA time series model designed to estimate the residual net birth-death employment not accounted for by the imputation. The historical time series used in the ARIMA model is derived from the unemployment insurance universe micro-level database and reflects the actual residual net of births and deaths over the past 5 years. In addition to this time series of actual residual net of births and deaths series, the ARIMA-based component of the birth-death model includes current sample information to inform the forecasts. More information on business births and deaths in the establishment survey is available at www.bls.gov/web/empisit/cesbd.htm.

The sample-based estimates from the establishment survey are adjusted once a year (on a lagged basis) to universe counts of payroll employment obtained from administrative records of the unemployment insurance program. The difference between the March sample-based employment estimates and the March universe counts is known as a benchmark revision, and serves as a rough proxy for total survey error. Benchmarks also incorporate changes in the classification of industries when necessary. The absolute average benchmark revision for total nonfarm employment over the prior 10 years is 0.2 percent. Over this time, revisions ranged from -0.4 percent to 0.3 percent.

NOTE: Veterans served on active duty in the U.S. Armed Forces and were not on active duty at the time of the survey. Nonveterans never served on active duty in the U.S. Armed Forces. Veterans could have served anywhere in the world during these periods of service: Gulf War era II (September 2001-present), Gulf War era I (August 1990-August 2001), Vietnam era (August 1964-April 1975), Korean War (July 1950-January 1955), World War II (December 1941-December 1946), and other service periods (all other time periods). Veterans who served in more than one wartime period are classified only in the most recent one. Veterans who served during one of the selected wartime periods and another period are classified only in the wartime period. Dash indicates no data or data that do not meet publication criteria (values not shown where base is less than 75,000).

¹ Includes self-employed workers whose businesses are incorporated.

² Refers to those who worked 1 to 34 hours during the survey reference week and excludes employed people who were absent from their jobs for the entire week.

³ Refers to those who worked 1 to 34 hours during the reference week for an economic reason such as slack work or unfavorable business conditions, inability to find full-time work, or seasonal declines in demand.

⁴ Refers to people who usually work part time for noneconomic reasons such as childcare problems, family or personal obligations, school or training, retirement or Social Security limits on earnings, and other reasons. This excludes people who usually work full time but worked only 1 to 34 hours during the reference week for reasons such as vacations, holidays, illness, and bad weather.

- Data not available.

NOTE: Detail for the seasonally adjusted data shown in this table will not necessarily add to totals because of the independent seasonal adjustment of the various series. Updated population controls are introduced annually with the release of January data.

Other services.....	337	300	5.0	4.5
Agriculture and related private wage and salary workers.....	131	150	8.2	9.7
Government workers.....	423	554	1.9	2.5
Self-employed workers, unincorporated, and unpaid family workers.....	444	398	4.3	4.0

¹ People with no previous work experience and people whose last job was in the U.S. Armed Forces are included in the unemployed total.

NOTE: Updated population controls are introduced annually with the release of January data. Effective with January 2025 data, industries reflect the introduction of the 2022 Census industry classification system, derived from the 2022 North American Industry Classification System (NAICS). Data for 2025 are not strictly comparable with earlier years.

HOUSEHOLD DATA

Table A-15. Alternative measures of labor underutilization

[Percent]

Measure	Not seasonally adjusted			Seasonally adjusted					
	Mar. 2025	Feb. 2026	Mar. 2026	Mar. 2025	Nov. 2025	Dec. 2025	Jan. 2026	Feb. 2026	Mar. 2026
U-1 People unemployed 15 weeks or longer, as a percent of the civilian labor force.....	1.7	1.9	2.0	1.5	1.8	1.8	1.8	1.8	1.8
U-2 Job losers and people who completed temporary jobs, as a percent of the civilian labor force.....	2.1	2.4	2.1	1.9	2.1	2.0	2.1	2.1	2.0
U-3 Total unemployed, as a percent of the civilian labor force (official unemployment rate).....	4.2	4.7	4.3	4.2	4.5	4.4	4.3	4.4	4.3
U-4 Total unemployed plus discouraged workers, as a percent of the civilian labor force plus discouraged workers.....	4.5	4.9	4.6	4.5	4.9	4.6	4.6	4.6	4.5
U-5 Total unemployed, plus discouraged workers, plus all other people marginally attached to the labor force, as a percent of the civilian labor force plus all people marginally attached to the labor force.....	5.1	5.6	5.3	5.1	5.5	5.3	5.2	5.3	5.3
U-6 Total unemployed, plus all people marginally attached to the labor force, plus total employed part time for economic reasons, as a percent of the civilian labor force plus all people marginally attached to the labor force.....	7.9	8.3	8.0	7.9	8.7	8.4	8.1	7.9	8.0

NOTE: People marginally attached to the labor force are those who currently are neither working nor looking for work but indicate that they want and are available for a job and have looked for work sometime in the past 12 months. Discouraged workers, a subset of the marginally attached, have given a job-market related reason for not currently looking for work. People employed part time for economic reasons are those who want and are available for full-time work but have had to settle for a part-time schedule. Updated population controls are introduced annually with the release of January data.

Primary and secondary jobs both full time.....	393	383	237	244	155	139
Hours vary on primary or secondary job.....	1,000	1,146	528	621	472	525

¹ Data refer to people who want a job, have searched for work during the prior 12 months, and were available to take a job during the reference week, but had not looked for work in the past 4 weeks.

² Includes those who did not actively look for work in the prior 4 weeks for reasons such as thinks no work available, could not find work, lacks schooling or training, employer thinks too young or old, and other types of discrimination.

³ Includes those who did not actively look for work in the prior 4 weeks for such reasons as school or family responsibilities, ill health, and transportation problems, as well as a number for whom reason for nonparticipation was not determined.

⁴ Includes a small number of people who work part time on their primary job and full time on their secondary job(s), not shown separately.

NOTE: Updated population controls are introduced annually with the release of January data.

¹ The indexes of aggregate weekly hours are calculated by dividing the current month's estimates of aggregate hours by the corresponding 2007 annual average aggregate hours. Aggregate hours estimates are the product of estimates of average weekly hours and employment.

² The indexes of aggregate weekly payrolls are calculated by dividing the current month's estimates of aggregate weekly payrolls by the corresponding 2007 annual average aggregate weekly payrolls. Aggregate payrolls estimates are the product of estimates of average hourly earnings, average weekly hours, and employment.

p Preliminary

NOTE: Data have been revised to reflect March 2025 benchmark levels and updated seasonal adjustment factors.
